

About Us

At Diabetic's Choice, we use PIR to treat the root cause of diabetes and other metabolic disorders.

We know everyone's diabetes is different, so we will work with you and your doctors to create an individualized care plan that fits your needs and lifestyle.

Our Vision

The team at Diabetic's Choice is passionate about the health and well-being of our patients, including the quality of life improvements that are possible with our innovative services.

RESTORE YOUR HEALTH • REGAIN YOUR LIFE

BENEFITS OF PIR

245,000+ safe and effective infusions:

95% of patients had neuropathy improved or resolved

76% showed improvement in at least one diabetes complication

75% of patients w/CKD (3a,3b,4&5) improved or stabilized at 12mo

41% of patients reduced medications

PATIENTS REPORT:

- reduced inflammation
- lower blood pressure
- reduced HbA1c
- significantly less neuropathy pain
- improved wound healing
- diminished neuropathy
- restored erectile function
- improved mood & sleep
- weight controlled

DIABETIC'S CHOICE

PHYSICIAN-DIRECTED PHYSIOLOGIC INSULIN RESENSITIZATION (PIR)

- PIR is an innovative treatment for diabetes & metabolic disorders
- Conventional treatments attempt to control high blood sugar (hyperglycemia) symptoms but only delay inevitable outcomes
- Synchronicity loss within the pancreas is a cause of insulin resistance
- Diabetic's Choice treats the root cause of diabetes which is insulin resistance

WHAT IS PIR?

- PIR is a multi-patented, FDA approved adjunct tool for metabolic disorders
- We use fast acting insulin, administered dynamically as a hormone (biologic) instead of a drug
- Our care plan uses a custom developed FDA approved pump and a patented, individualized treatment for precision insulin dosing
- We intermittently infuse small amounts of insulin as a biologic, the way the body naturally uses it
- This is NOT a standard pump with a basal rate, which actually overwhelms receptors & creates more insulin resistance

HOW DOES PIR WORK?

- The PIR infusion process bio-mimics healthy pancreas physiology creating the insulin peaks and valleys required for cells to properly metabolize glucose
- PIR upregulates insulin receptors, previously fatigued by overstimulation, allowing cells to utilize insulin more efficiently
- Insulin functions as the key to open glucose channels & glucose is the fuel the body needs to create energy (ATP)
- By maximizing glucose metabolism & restoring metabolic function, we optimize ATP production, increase the capacity for cellular processes and attain maximum cellular health with superior patient outcomes

- Our goal is to reverse insulin resistance and reduce the inflammation caused by oxidative stress
- We target metabolism, decrease inflammation & optimize cellular wellness
- This is not a cure! In conjunction with traditional care plans, diet & exercise, PIR creates the energy the body needs to give patients hope instead of guilt

Restore Your Health - Regain Your Life!
